WORK EXPERIENCE

Full-stack Developer - Mobiliza EAD - 2019 ➜ Now

Responsible for developing back-end and front-end solutions (mainly in NodeJS, React Web, and React Native). Has some DevOps assignments, like supporting the implementation of a CI/CD infrastructure with Kubernetes, and open-source ones, like developing projects for the community.

Full-stack Developer - Sicoob Credija - 2015 ➜ 2019

Responsible for developing solutions for the most diverse needs of the company, like automation of repetitive routines and administration apps, mainly written in Java and VueJS. Had the DevOps assignment of implementing a CI/CD infrastructure in the company's servers using open source stack.

EDUCATION

Bachelor of Computer Science - UNESC - 2014 ➜ 2018

Graduated with a research paper in the field of software engineering (CI).

PROFILE

I'm a software engineer with 5+ years of experience and a bachelor's degree in Computer Science. I'm also an open-source collaborator, either through my own or other people's projects.

I'm that kind of person that gets bored easily, so I'm constantly studying new approaches, technologies, and paradigms to turn the tables... The dynamics of programming is what drives me!

I'm currently developing back-end services with NodeJS (mainly Express), front-end apps with Vue/React and mobile apps with React Native. Also, I've got a lot of experience with Java, and more specifically, Spring Boot framework.

It's worth mentioning that because of some work done in DevOps space I've got a very good understanding of CI/CD tools, Docker and Kubernetes.
